TASK2

Make them uncomfortable

Congrats on completing the first task!!!

There is a thermostat system in the hallway that will turn on the air conditioning if the temperature is more and a heater if the temperature is less.
Imagine air conditioner as the red led and heater as blue led and write a code to change the operation.

If it is the hot heater should be on and if it is cold ac should be on.
This will make the terrorists uncomfortable and will make them walk around the hallways.

You can use tinkercad to show us your hack works.
